

**Supplementary Table 2.** Mean and standard deviation (SD) of the log<sub>10</sub>-transformed relative gene expression values for both cortisol (10<sup>-7</sup> M) and control treated samples.

The 95% confidence interval (CI) of the mean is shown next to each group. The p-values represent the statistical difference between these 2 groups using the mixed model analysis. P-values < 0.00625 (adjusted for multiple testing) were considered significant (highlighted in bold).

Gene	Control (n=51)				Cortisol 10 <sup>-7</sup> M (n=49)				Mixed model analysis <i>p</i> -value	
	Mean	SD	95% CI of the mean		Mean	SD	95% CI of the mean
